

# • LASER HAIR REMOVAL •

## How does it work with grey, white, or blond hair?

**Motus AX** is more effective on blond and white hair than most lasers, but results sometimes take longer to achieve, require higher settings, and may be less than with pigmented hair. Grey hair may be resistant or only reduced. Still, we get great results with most blond and white hair.

## What can it do for hormonal hair or hair that is not typical?

Hair that is not typical, but is a result of aging, medications, genetics, and hormonal changes, does not follow standard hair growth cycles and often involves an ongoing production of new follicles. Laser destroys hair follicles when they are in their growth cycle at the time of each session. New follicles will need to be targeted in a touch up session.

## What is the cost of this treatment?

We offer 1 Year Unlimited Treatment Packages so you get all the treatments you need for one low price - whether it takes 6 sessions or 10, you are covered. Treatment is surprisingly affordable. We always offer reasonable prices for this top technology. In addition to well priced single treatments, **1 Year Unlimited Packages** are available for any area, or for **Head to Toe Full Body** laser hair removal. Individual "touch up" low cost maintenance treatments are available for treating newly developed follicles and staying hair free.

## NEW MOTUS AX PAINLESSLY ELIMINATES UNWANTED HAIR

*Tired of waxing, shaving, plucking and tweezing only to end up with razor bumps, stubble, rashes and irritation?*

**BUT SCARED OF THE PAIN ASSOCIATED WITH MOST LASER HAIR REMOVAL TREATMENTS?**

***Now, you can get the smooth hair free skin you've always wanted WITHOUT THE PAIN OF PREVIOUS LASER HAIR TREATMENTS!***

All you need is a few comfortable treatments to get smooth, lasting results. Motus AX, the newest top technology, revolutionizes your laser hair removal experience. Motus AX targets and destroys the follicles responsible for hair growth PAINLESSLY without harming the surrounding skin.

**Why choose Motus AX, the newest and PAINLESS option available, for treating unwanted hair?**

Motus AX brings us the benefits of an Alexandrite laser without any of the cons associated with earlier lasers. Motus AX delivers amazingly effective results - smooth, hair free skin. It's in motion technology, with a painless cooling treatment tip, finally makes laser hair removal truly PAINLESS! This safe, in office, no downtime procedure involves quick sessions and no recovery. Treatment results in the destruction of functioning hair follicles, ending the embarrassment of unwanted hair.

**What results can I expect?**

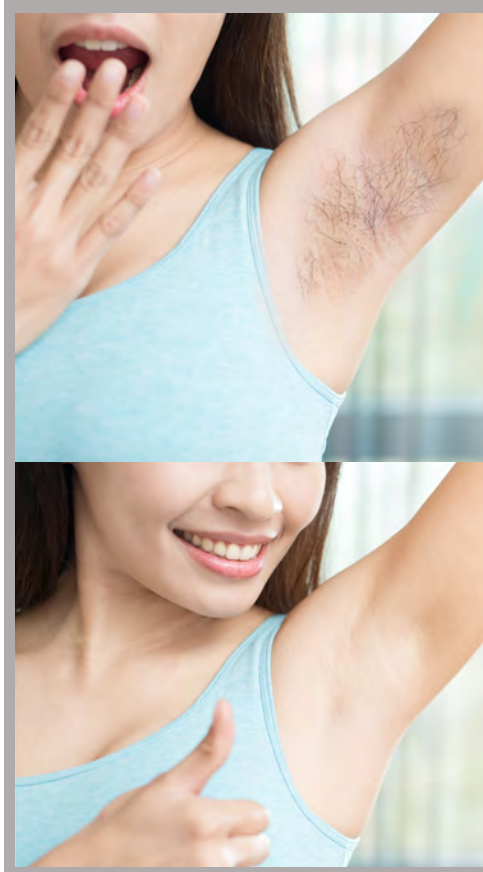

You can expect to see a significant, yet gradual, decrease in hair density and the amount of hair in the area with each treatment. Multiple treatments are needed for complete removal.

**How long do the results last?**

This treatment produces permanent damage to hair follicles and is lasting. Some patients find that they do not require further treatment for years if ever. For some, extremely low cost maintenance sessions 1-3 times per year destroy newly developed follicles and keep the area hair free.

**When will I notice the results?**

**Motus AX** is an alexandrite laser, the most efficacious laser for hair reduction. Results will appear noticeable in days or in the week following each treatment. Each painless session is estimated to destroy 10-15% of the follicles in the treated area. So, there is further visible reduction in hair with each session. While every individual's growth cycles and hair dispersement are different, our protocol aims to achieve the desired result in as few sessions as possible. Full results will be achieved after the series is completed. Individual maintenance sessions may be necessary to further the result in patients with more growth cycles, those that are prone to produce new follicles more frequently, and those with hormonal or medical conditions affecting hair growth. **Motus AX** delivers results that surpass other hair removal lasers for light and dark skin types!

**Get hair free fast, start your treatment now!**

**How many treatments are needed?**

The recommended treatment is our **1 Year Unlimited Package**. Patients commonly require 5-10 sessions to achieve desired hair reduction. Some patients will achieve desired result with less sessions. Our 1 Year Unlimited Package is the most effective at eliminating hair from an area, or from the entire body. This varies based on individual factors and cannot be precisely pre-determined. Patient response is excellent & highly recommended.

**How are the treatments spaced?**

Treatments are spaced 4-8 weeks apart. This varies by area based on the treated area's average growth cycles.

**How long does the treatment take?**

Each treatment takes only 10-15 minutes.

**Is the treatment painful?**

No. Motus AX treatment is truly PAINLESS. There is no need for numbing cream or worry. The Moveo technology allows the effective energy to be gently delivered rather than in numerous single painful blasts. Motus AX is a PAINLESS and effective new technology.

**Is the treatment safe?**

Yes. Motus AX is safe on light and dark skin types, even slightly tanned skin, and is much gentler to surrounding tissue than other brands. With experienced practitioner use, there aren't any reported severe complications. Pigmentation changes are possible with any laser treatment, but the Motus AX makes treatment the safest by delivering the cumulative necessary energy gently, with Moveo, rather than in harsh single bursts. Motus AX Moveo technology and our trained practitioners allow us to avoid complications and deliver smooth, hair free skin.

**Is there any downtime or recovery?**

No. Patients can return to work or activities right away.

**What is the aftercare for this treatment?**

Simple. The treated area may be red, sensitive to hot water, or tender after treatment for a few hours. Heated hair may be shed from the follicle in a few days. Follicles may be inflamed briefly - this subsides naturally. Do not pick at the follicles.
