

Is there any downtime?

No. Patients can carry on with their normal activities and sexual activity, immediately after each session.

What is the treatment schedule?

1 course of Acoustic Wave Erectile Therapy involves 6 sessions, 2 treatments per week. 2 courses are often desirable for severe dysfunction. Each session takes less than 30 minutes.

Do I need continuous treatment?

No. There is no need for lifelong treatment. Often 1 course of treatment will lead to long-term improvement without the need for continuous treatment. Periodic maintenance may be beneficial.

Is the treatment painful?

Treatment is pain-free and patients may feel a tingling sensation.

Is It safe?

Yes! This is an FDA cleared technology, developed in Europe and used worldwide in all areas of medicine, including orthopedics and urology, with virtually no risks or side effects. Some may experience minor discomfort for a few days. Tylenol is sufficient for any discomfort.

Acoustic Wave Therapy for Peyronie's Disease

Peyronie's disease is caused by fibrous scar tissue, which impacts the curvature of the penis, that leads to pain and erectile dysfunction. Using low intensity acoustic waves and the Priapus Shot, we have been able to straighten the erection and improve elasticity of connective tissue.

Acoustic Wave Erectile Therapy and ED medications

Many men find that they no longer need medications to obtain and maintain a quality erection. Other men find that they get a better erection with medications after treatment than they got with medications alone.

Is Acoustic Wave Therapy covered by insurance?

Insurance does not cover the cost of Acoustic Wave Therapy. Even without insurance coverage, the out of pocket cost of prescriptions and other less effective methods make this treatment a greater value.

Cost of Acoustic Wave Erectile Therapy:

The cost of your recommended individual therapy will be discussed prior to treatment.

1 course-6 sessions:

\$2400

OR

\$3900 with P-Shot -includes 6 Acoustic Wave sessions, 1 P-Shot treatment, and a penile pump.

2 courses-12 sessions:

\$4400

OR

\$7400 with 2 P-Shots -includes 12 Acoustic Wave sessions, 2 P-Shot treatments, and a penile pump.

Maintenance sessions: \$450 each.

Acoustic Wave Erectile Therapy is affordable and the results are spontaneous, immediate, and more long term than many other methods.

Payment Options

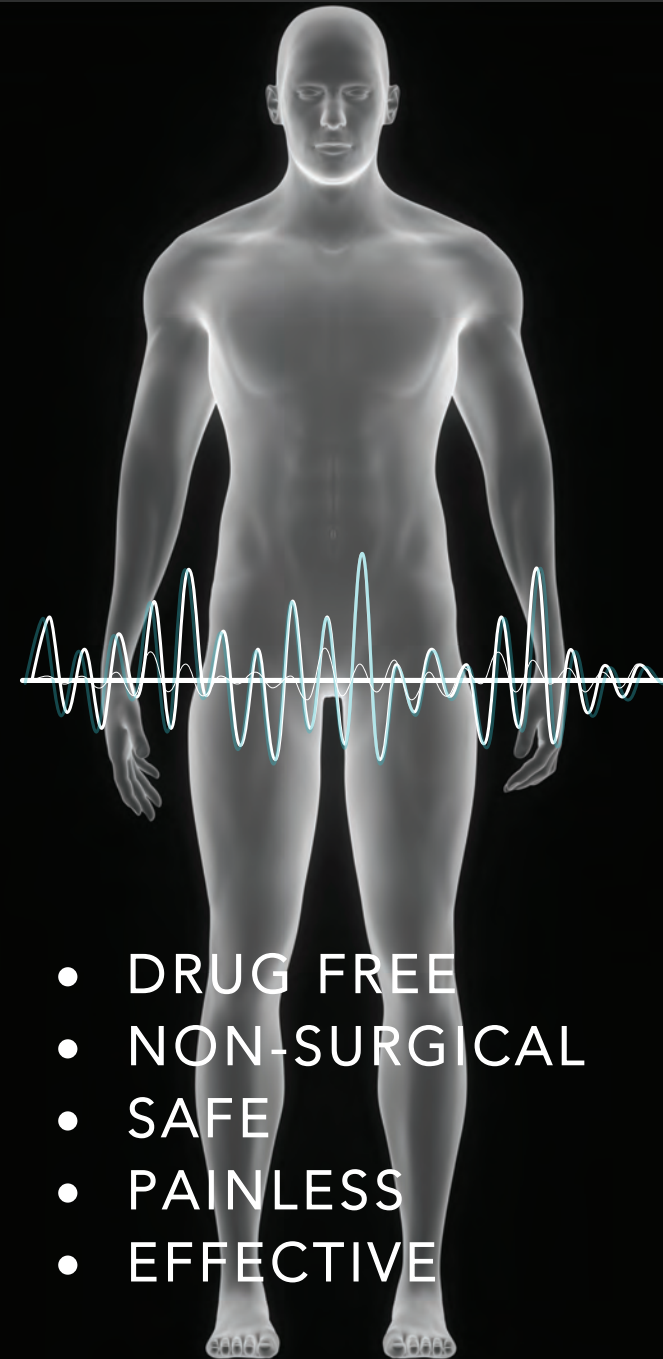

Payment is required to reserve your treatment time. We accept cash, check, all major credit cards, health savings cards, and CareCredit.

**OPTIMIZE ERECTILE FUNCTION
AND RESTORE SEXUAL HEALTH**

At Contemporary Health Center, we believe in treating underlying issues with regenerative medicine.

Erectile issues aren't just a sexual problem. A fulfilling sex life can lead to greater satisfaction in social, family and work relationships. The sooner erectile issues are treated, the better the outcome. Disuse progresses the loss of function and deterioration of healthy tissue, disuse atrophy. Proactive treatment makes it easier to correct it and prevent future deterioration.

Most men suffering from erectile decline have vascular issues affecting the vessels that supply blood to the cavernous bodies of the penis, resulting in inadequate blood flow followed by premature draining. The end result is a decreased ability to develop and maintain an erection.

Acoustic Wave Therapy is a highly effective treatment that can restore more optimal erectile function. Cardiologists have proven that Acoustic Wave Therapy works to stimulate the growth of new blood vessels. Now, it is being used on the cavernous bodies of the penis to create new blood vessels, enabling men to achieve and maintain firm spontaneous erections.

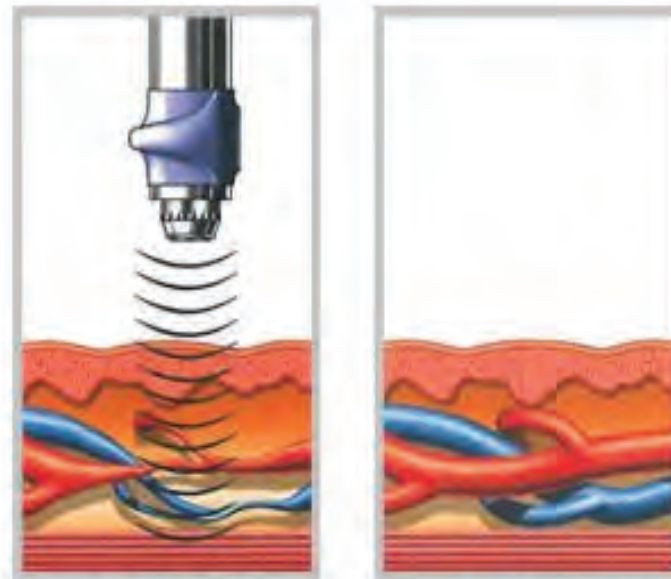

How does Acoustic Wave Therapy work?

Treatment involves low-intensity waves (similar to ultrasound waves) being transmitted onto the treatment area. This creates micro trauma to the tissue, stimulating the body's natural healing response and the growth of new blood vessels for improved blood supply, resulting in improved erectile strength and stamina. For even more results, Acoustic Wave may be combined with the P-Shot, which adds a high concentration of growth factors to strategic areas according to a patented protocol.

How does Erectile ShockWave Therapy differ from other treatments or medication?

Acoustic Wave Therapy is a regenerative approach that aims to restore erectile health and function, helping men regain a spontaneous, active sex life. Most other therapies involve the continuing use of medication or injections, diminished effectiveness over time, pre-planning when a man wants to have sex, or surgical implants.

Acoustic Wave Therapy is a simple, drug free, painless, non-invasive procedure that cures or reduces vascular ED difficulties instead of just treating the symptoms. Our treatment uses low intensity-extracorporeal sound wave therapy (LI-ESWT) to enable natural spontaneous erections.

BEFORE **AFTER**

Is Acoustic Wave Therapy right for me?

Men with high blood pressure, diabetes, obesity, high cholesterol and heart disease with vascular erectile difficulties can benefit -almost all patients, of any age, even those on anticoagulants. Acoustic Wave Therapy works best for men who have mild to moderate ED, which usually means that medications like Viagra work well or at least help. As many as 70% of these men will no longer need medication to attain an erection. For men who are not candidates or if Acoustic Wave Therapy does not provide satisfactory improvement, other treatments for ED are available.

***Assessment by our trained practitioner is necessary.**

Benefits of Acoustic Wave Erectile Therapy:

- Treats the cause, not just the symptoms
- Enables Spontaneous Erections
- Visible Results as soon as 3 weeks
- Offers proven clinical long-term results
- Completely safe with no side effects
- Non-invasive, totally painless
- Triggers natural repair by increasing blood flow
- Restores sex with stronger, firmer, longer-lasting erections
- 70%+ Success Rate Compatible with other treatments

Often, the result is that men are able to obtain erections more normally. Men are able to get better erections without medications or are able to get better erections with the same or lower dose of medications.

When will I see results?

For many men, there is an almost immediate improvement in the symptoms of erectile dysfunction. Patients report noticeable improvements within 3-12 weeks.

How long do the results last?

The results are long lasting and may be permanent. Effects have been scientifically proven to last 2-3 years, but this varies with individual health and lifestyle factors.

Is the treatment effective?

Studies show that Acoustic Wave Therapy improves the quality of erections in over 70% of men with vasculogenic erectile dysfunction. Sadly, not every man will benefit. As many as 30% of men may not achieve the desired result. Still, the potential benefits -spontaneous and sustainable erections -make it worth a try!

How to Get Started

The first step is to schedule a consultation. We will discuss your condition, medical history and treatments you've tried. Then, we will review treatment options to help you decide which is best.
